GATE 1 — MANUAL DRY RUN

Adversary Test Automation | 21 October 2026

1. Lab Readiness

Check	Result
Wazuh agents	ubuntu-lab and windows-host: Active
Telemetry	Ubuntu audit and Windows Sysmon events previously verified
Lab network	lab0: 192.168.56.10/24; mgmt0: 192.168.57.10/24
Rebuild check	Existing lab VM and network checked today; clean rebuild not repeated today

2. Test Results

All three commands ran successfully on the Ubuntu lab and matching Wazuh audit events were found. Each event matched custom rule 100100 (level 5). This confirms process telemetry collection, not technique-specific detection.

ATT&CK technique	Command	Wazuh evidence	Result	Screenshot
T1082 — System Information Discovery	hostnamectl	/usr/bin/hostnamectl; key placement_test; rule 100100, level 5	Executed; event found	TEST 1
T1016 — System Network Configuration Discovery	ip addr	/usr/bin/ip; argument addr; key placement_test; rule 100100, level 5	Executed; event found	TEST 2
T1033 — System Owner/User Discovery	id	/usr/bin/id; key placement_test; rule 100100, level 5	Executed; event found	TEST 3

- TEST 1

3. Gate 1 Status

Three techniques	Complete
Telemetry results table	Recorded the three Wazuh event-detail results
Lab rebuild from code	Previously completed; current VM/network checked
Overall status	Manual dry run complete
